

Lever Hoist

Model LE-UNO Capacity 750-6000Kg

Lifting Equipment Ltd

Lever Hoist

Model LE-UNO Capacity 750-6000Kg

The LE-UNO is the standard free chaining device intended to rapidly attach the load or else to pull the chain through the hoist in both directions. This model is tough with stamped steel construction as well as a company design. The smooth free chaining device in addition to low tare weight makes the LE-UNO a practical, universal device.

Main Features

Chain guide build-into the casing, for that reason it eliminates jamming of the chain on the load sheave.

Taught chain stop, in addition to standard free chaining device to rapidly attach load

Forged suspension and load hooks, produced from high alloy, non-ageing tempering steel

Will bend under overload as opposed to breaking

Ergonomic hand lever which has a rubber grip

Zinc plated alloy chain.

Yellow chromate finish, in accordance to national and international standards

Hard chromium plated hand wheel

Automatic screw and disc style load brake together with corrosion protected components

Because of optimized gearing a minimum effort is required to use the short hand lever.

Strong bottom block together with enclosed bolt connections
